

Colligo Email Manager 5.5 SP2

Release Notes

Email Manager System Requirements

Operating System

Colligo Email Manager runs on the following versions of Windows:

- Windows 8
- Windows 7
- Windows XP Professional
- Windows Vista

Software Requirements

Colligo Email Manager is compatible with the following software:

- Microsoft Outlook 2007, 2010 SP1, or 2013 (32-bit or 64-bit edition)
- Internet Explorer 7 or higher (optional)
- Windows 2008R2 Server (for Terminal Services)

Colligo Email Manager also requires the following supporting software on the client machine:

- Microsoft .NET framework 4.0 Runtime
 - <http://www.microsoft.com/download/en/details.aspx?id=17718>
- Microsoft Visual C++ 2010 Redistributable Package
 - 32-bit Operating System:
<http://www.microsoft.com/download/en/details.aspx?id=5555>
 - 64-bit Operating System:
<http://www.microsoft.com/download/en/details.aspx?id=14632>
- Visual Studio Tools for Office (VSTO) 2010
 - <http://www.microsoft.com/download/en/details.aspx?id=20479>
- Microsoft Office PIAs
 - Office 2013: check with Microsoft for Office 2013 PIA availability
 - Office 2010: <http://www.microsoft.com/download/en/details.aspx?id=3508>
 - Office 2007: <http://www.microsoft.com/download/en/details.aspx?id=18346>

Server Software Requirements

Colligo Email Manager supports connectivity with any of the following editions of SharePoint:

- Microsoft SharePoint Server 2010 or 2013
- Microsoft SharePoint Foundation 2010 or 2013
- SharePoint 2013/2010 Online (Office 365)
- (Optional) Microsoft FAST Search Server 2010 for SharePoint

Hardware Requirements

Colligo Email Manager has the same client system requirements as Office, which you can find here:

<http://technet.microsoft.com/en-us/library/ee624351.aspx#Overview>

Resolved Issues

Release 5.5 SP2 (build 5.5.25.0) April 12, 2013	
Reference #	Description
45192471	Authentication has been fixed for specific scenarios where multiple authentication methods are available in a Claims-Based Authentication environment.
47938393	Favorites and Folders defined for locations located directly off the root in a SharePoint URL can now be pushed successfully from Colligo Administrator.
47938591	Choice fields rendered as radio buttons or checkbox lists in the Edit Properties dialog are now given a fixed height with scrolling. This is for improved usability.

New Features

Release 5.5 SP1 (build 5.5.19.0) February 22, 2012	
Reference #	Description
42081719	Email Manager now supports Proxy Auto-Config (.pac) files as configured through Internet Explorer.
44982463	A new setting now allows you to upload an attachment without extracting the metadata from the associated email. For more information about this setting and its related MSI property, see: http://www.colligo.com/support/setting/enable-attachment-metadata-extraction/

Resolved Issues

Issue #	Description
40467117	The Attachment Handler searches by File Name and Author unless the List View Threshold is exceeded. If this occurs, Email Manager now searches by Title if this column has been indexed in SharePoint.
41046247	Users who do not have write access to the Windows registry are now able to open the Configuration dialog.
41049195	Previously, when using FAST search you could enter partial matches because Email Manager added wildcards to the query. This is no longer done to avoid Query too Complex errors when too many results were returned. Now users must enter specific wildcards when needed.
41908425	Metadata defaults set by SharePoint at the folder level are now applied properly to subfolders.
41980007	Office 365 login timeouts are now handled in a way that no longer requires user action.
44853113	Email messages with missing date fields can now be uploaded.

New Features

Release 5.5 (build 5.5.7) December 14, 2012	
Reference #	Description
38268073	Uploading an attachment from an email now extracts metadata values from the parent email as well as from the document. This is seamless in Outlook 2010 and Outlook 2013, but in Outlook 2007, users need to dismiss an Outlook security warning when uploading an attachment.
39720563	ADFS 2.0 is now supported as an authentication method. For more information, see the Colligo Email Manager Administrator's Guide .
41052115	A setting is now provided to specify whether to show long paths (to the server level) or short paths (to the configured site level) for upload locations. The default is long paths. For more information about this setting and its related MSI property, see: http://www.colligo.com/support/setting/display-path-view-for-upload-locations/
41264429	Office 365 SharePoint site log ins are now done through the main window, rather than a pop-up browser window.

Resolved Issues

Issue #	Description
39153851	Filtering search results by file type is now supported for SharePoint 2013 search locations.
39485869	Authentication messages are now specific to the SharePoint version.
39564119	Trailing ">" characters are no longer shown for search locations when searching at the site level.
39823381	Terms are now retrieved and sorted consistently in the type-ahead control for selecting managed metadata terms when there are a large number of terms with the same prefix.
40016631	Terms in a managed metadata field that are not marked Available for Tagging in SharePoint can no longer be selected.
40440203	Full paths for SharePoint locations now display port numbers when the port is not default (i.e. 80 or 443).
40540257	Some fields were not displaying in the Edit Properties dialog and values were not being extracted from emails into those fields. This has now been fixed.
40815033	File names are now shown in search results instead of the Title field. This change was made because Title is not always available for a SharePoint list item.
40815139	Users are no longer prompted to "Repair" a Microsoft C++ Redistributable install when installing Colligo Email Manager.
40815183	Users are no longer prompted to install the Microsoft C++ Redistributable 2010 package when the 2010 SP1 version is already installed.
41039033	ASPX files are no longer returned as search results for SharePoint 2013 sites.
41197527	Full file location paths, down to the server, are now shown in the Move/Copy menus in Outlook 2007.

New Features

Release 5.4 SP4 (build 5.4.55.0) November 14, 2012	
Reference #	Description
37705149	The full path of SharePoint locations, down to the server level, is now presented in the upload location tooltips throughout the product.
39507231	A notification is now presented when items are added to the Recovered Items folder due to a failed upload.

Resolved Issues

Issue #	Description
36328821	SharePoint 2013 keyword searches now work as expected.
36403001	Previously in Email Manager, if you were editing fields in the Edit Properties dialog and you pressed Enter , the field at the cursor location was not saved. Now, when you press Enter to submit the Edit Properties form, all fields are saved.
37456635	Email Manager now correctly interprets the new location of terms that have been moved to a new location in a Term Store in SharePoint.
37625819	The Connect to Email Manager functionality in Internet Explorer now connects to all types of SharePoint 2013 locations.
38017807	The contextual (right-click) Properties and Delete Folder options are now available as expected for non-Email Manager Outlook folders as applicable.
38018039	Contextual (right-click) menus in the Email Manager section of the Outlook folder tree are now displaying correctly when the logged in user is a member of the Colligo Administrator Control Group.
38832781	Uploading to SharePoint 2013 locations that include Managed Metadata fields will now succeed.

New Features

Release 5.4 SP3 (build 5.4.44.0) October 4, 2012	
Reference #	Description
34302441	Email Manager now supports SharePoint 2013 Preview, Office 2013 Preview, and Windows 8.
36027071	A new setting has been added to specify whether to create minor or major versions when uploading (and overwriting) emails and documents. This setting is only relevant when the SharePoint document library is configured to accept both major and minor versions at Check In. For more information about this key, see: http://www.colligo.com/support/setting/default-versioning-behavior/
36841589	A new setting has been added to store taxonomies attached to managed metadata fields for the duration of the Outlook session. This is useful for improving the performance when the Edit Properties dialog loads, and can be a viable option if taxonomies are changed infrequently. By default, this property is set to refresh the taxonomies on each upload. For more information about this key, see: http://www.colligo.com/support/setting/refresh-taxonomy-on-each-upload/

Resolved Issues

Issue #	Description
33356513	Field names in the mapping file (ColligoMappingConfig.xml) are no longer case sensitive.
34302441	The browser view for SharePoint and Launchpad locations now appear correctly in Office 2013 Preview.
35778941	Office 365 sites that were upgraded from BPOS are now supported.
35803875	If new settings from Colligo Administrator were being written to the registry at precisely the same time search locations were being read from the registry, Email Manager would fail to load. This has now been fixed so there is no conflict.
36094113	A notice to upgrade IE no longer appears on the Office 365 login screen.
36479077	Users who are in the Colligo Administrator Control Group are no longer allowed to add sites, favorites, or folders in cases where none have been assigned to them.
36841213	Users can no longer add items manually to the Email Manager Recovered Items folder.
37120051	When Email Manager is configured to use FAST Search Server 2010, searching for more than one term now returns results. When multiple terms are used, every term specified on the search line will occur in each search result returned. Each term may be partial to a word in a returned document. (e.g. "perf phone" may return a document that contains the words "performance microphone".)
37140573	The context (right-click) menus for subfolders of the Recovered Items folder are now limited only to the options Properties and Delete Folder .
37185047	Upload performance is now improved when users are uploading to a document library with many metadata properties.

New Features

Release 5.4 SP2 (build 5.4.33.0) August 30, 2012	
Reference #	Description
32937415	When uploading to the target of a SharePoint Content Organizer rule, the content types, field schema, and folder-level defaults are all obtained from the selected upload location rather than the drop-off library. This is different from default SharePoint behavior, which obtains this information from the drop-off library.
34540921	The Launchpad feature may now be disabled via the MSI property, ENABLE_LAUNCHPAD or the registry key EnableLaunchpad . For more information about this configuration setting, please see: http://www.colligo.com/support/setting/enabling-launchpad/
34973377	A Folders tab is now available as a filter when users are choosing SharePoint items to attach to an email.

Resolved Issues

Issue #	Description
32941947	The toolbar in the Launchpad configuration tab no longer includes cut-off text when displaying in French.
33241287	The Connect to Email Manager button in Internet Explorer can now successfully resolve and connect to a subfolder of a document library.
33369579	The Search feature now returns results from search locations that are SharePoint Records Centers.
33450083	Launchpad may now include URLs that are ASP.NET (.aspx) sites.
34664819	It is now possible to upload emails with extremely long subject lines. In past releases, an error message was shown, and upload was not possible.
34806809	Default values are now sent to SharePoint correctly when hidden in the metadata dialog with the HiddenMetadataFields registry key.
34920311	Emails or documents with an equal sign in the subject or filename can now be successfully uploaded to SharePoint.

New Features

Release 5.4 SP1 (build 5.4.18.0) July 10, 2012	
Reference #	Description
28629855	Email Manager is now available in German and Spanish. If users have a French/German/Spanish version of Microsoft Office installed, Email Manager displays in the same language; otherwise it displays in English.
30165495	Users can now choose to search all mail folders in their default account, in addition to the Inbox.
30239053	Users now have the ability to restart Outlook after they have updated the Launchpad settings directly from the configuration screen.
30811945	Users can now import and export Launchpad settings.
30812917	After users enter a URL for a button or item in Launchpad, the icon associated with the URL now displays in the icon space. Users can clear the icon if they want to choose a custom one.
30868621	Users now have the ability to customize the label and color for the Copied to SharePoint header in emails that have been filed to SharePoint.
30868839	The ability to Move or Copy an email from the right-click contextual menu is now available in Outlook 2007.
30038325	The Launchpad feature is now configurable in Colligo Administrator.
30727941	Metadata fields can now be hidden from the Edit Properties dialog using a registry key; the fields are still visible in SharePoint.
30870263	Analytics for Email Manager can now be enabled or disabled using the following setting: http://www.colligo.com/support/setting/enabling-analytics/

Resolved Issues

Issue #	Description
30870347	Uploading an item to a list that has the property Require documents to be checked out before they can be edited? set to Yes now properly applies the item's associated metadata.
30916607	Lists created under a site that have non-default managed paths are now supported. This includes the scenario of a list template being imported into the site.
31175295	If an item was filed to an Email Manager Favorite or Folder that was a subfolder of a SharePoint list, the item may have been filed to the wrong location if a subfolder with the same name existed in another site. This scenario has been resolved.
30919337	An error where the installer suggests the x86 version must be used when it should be the x64 version has been resolved.
32037417	Right clicking on the PST root and clicking Refresh no longer removes the Browser object.

New Features

Release 5.4 (build 5.4.9.0) June 5, 2012	
Reference #	Description
2370	Users now have the ability to clear the search results by pressing the X button after a search has been stopped or completed.
2696	Colligo Launchpad allows users to extend their Outlook experience by creating groups of buttons in an Outlook 2010 ribbon for one-click access to frequently-used websites, web applications, and Email Manager favorites.
2769	Users can now right-click on an email in Outlook 2010 and use the context menu to move and copy emails to SharePoint.
3328	Libraries with a large amount of list items (folders, documents, etc.) may be built out in the Outlook folder tree as Email Manager Folders without running into SharePoint's List View Threshold. Users can also now upload to these SharePoint locations. The indexing of columns in SharePoint is necessary. For more information, see: http://www.colligo.com/support/kb/managing-sharepoints-list-view-threshold/
28683895	External List (BCS) columns are now available in the metadata prompt along with a picker for searching into the associated BCS data source. To disable this functionality, use the MSI property, ENABLE_METADATA_TYPE_EXTERNAL_FIELD or the registry key EnableMetadataTypeExternalField with the value of "0".
28687871	The search mode (e.g. SharePoint 2010, Fast Search, etc.) may be set via an MSI property, SEARCH_MODE or registry key SearchMode. Previous ways to do this are now deprecated.
28688357	The Outlook PST folder tree (i.e. Email Manager favorites and folders that support drag and drop and online view) can now be disabled using an MSI property, OUTLOOK_FOLDER_OPTION or the registry key OutlookFolderOption with the value of "0".
30084605	If Colligo Contributor Outlook Add-in is installed, the prompt advising the user to disable it may be turned off with MSI property, ENABLE_CONTRIBUTOR_DETECTION_PROMPT or the registry key EnableContributorDetectionPrompt with the value of "0".

Resolved Issues

Issue #	Description
2060	Adding a Favorite or Folder no longer adds the location to History.
2375	When a user uploads a file of a type not supported in Outlook PSTs (e.g. registry files, executables, etc.), an error message indicates that the file type is not supported. Similarly, when attempting to upload a file of a type configured as blocked for a SharePoint location, an error message is shown in the upload window.
2839	Emails which include properties with inline character encodings such as Unicode Chinese characters are now correctly extracted during the upload process.

3188	Uploading an email with a tab character in the Subject line no longer results in an "Illegal characters in path" error message.
28892525	Uploading multiple files or emails with the same name is now allowed and the uploaded documents are correctly linked with their respective metadata.
29025603	Navigating into sub-sites is now supported in the case when there exists a site where the logged in user has no access. Navigation in both the Outlook PST folder tree and in the location pickers is fixed.
29430343	Connecting to a location via the Connect to Colligo Email Manager feature in Internet Explorer now correctly works with non-default credentials.
29431797	Connecting to a location via the Connect to Colligo Email Manager feature in Internet Explorer no longer flashes conflicting status messages on the screen.
30034319	A specific scenario has been fixed where doing a group-edit of metadata in a multi-item upload was causing the Content Type of a document to be cleared.
30088127	The setup wizard no longer pops up a second time on first creation of a new email in Outlook 2007.
30088451	Search no longer fails when the search term includes angle-brackets (i.e. < or >) in the search term.
30090247	The Managed Metadata term picker now hides the ability to add terms when the underlying SharePoint termstore is marked closed.
30177953	Enterprise Keywords can now be applied to emails for upload to SharePoint.
30192421	Check for Updates now works correctly with trial license keys.

New Features

Release 5.3 (build 5.3.7.0) April 10, 2012	
Reference #	Description
1135	Users can now copy a whole folder from the Outlook folder tree to a SharePoint location.
2954	Users can now easily insert documents as attachments or links to SharePoint.
2441	Email Manager now supports Forms-Based Authentication.
3085	<p>The default email address extraction when uploading an email message is now the SMTP address format: e.g. myname@mycompany.com, rather than a mail-system-specific address with type fields identifying the address format.</p> <p>If you prefer to have the mail-system-specific address as before, you can use the MSI property EXTRACT_SMTP_EMAIL_ADDRESSES_ONLY or the registry key ExtractSmtEmailAddressesOnly with the value of "0" to revert to the prior behavior.</p>
3219	Email Manager is now available in French.
3337	<p>The Install License Key menu option can now be disabled using an MSI property or registry key. For more information, see:</p> <p>http://www.colligo.com/support/setting/enabling-the-install-license-key-menu-option/</p>

Resolved Issues

Issue #	Description
3045	The Connect to Colligo Email Manager button in Internet Explorer now properly supports non-default credentials when adding a SharePoint location as a Favorite.
3049	Lookup columns are showing properly in the metadata dialog. This was a regression in version 5.2.
3186	When users double-click an email to display it in its own window, the Move and Copy buttons now file the email in the stand-alone window, rather than the email selected in the list view.
3261	Activating Colligo Email Manager by email no longer results in an error message in Office 2007.
3271	When SharePoint folder-level default values for Managed Metadata columns are set up in SharePoint programmatically, they now properly display in the metadata dialog.
3330	The query to receive uploaded entries has been optimized, resulting in improved upload speed when uploading to lists with many entries.
3331	Uploads no longer require users to have the Manage List permission in SharePoint.

New Features

Release 5.2 February 13, 2012	
Reference #	Description
510	Users can select an email in the list view or double-click it to display it in its own window; the Move or Copy functionality is now available in both views.
797	Users now have the ability to mark an email as Copied to SharePoint .
1752	Users now have the option to send an item from the search results as an attachment.
2018	Users can now change their license key from within the Colligo Email Manager group in Outlook.
2693	Users now have the ability to check for software updates from within the Colligo Email Manager group in Outlook.

Resolved Issues

Issue #	Description
2717	When Email Manager folders are configured in Outlook, performance is now improved when starting up Outlook, or when adding or refreshing a folder.
2766	If field order changes are made to a SharePoint content type, the changes are now reflected in Email Manager.
2767	Required fields at the SharePoint column level that have been marked optional at the SharePoint content type level now display as optional in Email Manager.
2820	Adding an Email Manager favorite with an extremely long URL no longer causes Email Manager to fail on starting Outlook.
2828	When users click Cancel during a Move drag-and-drop to a Favorite or Folder location, Email Manager now correctly moves all intended uploaded items to the Recovered Items folder.

Resolved Issues

Release 5.1 SP3 – December 16, 2011	
Issue #	Description
2603	A specific HTTP request header that was causing Claims Based Authentication to fail has been removed.
2604	Some servers are configured to require a UserAgent property for SharePoint web service calls. This is now specified in all SharePoint service calls.
2699	Users can now drag-and-drop attachments directly to a SharePoint location if the PstDisableGrow value is set to 1.

New Features

Reference #	Description
2650	Support has been added for a Push to Application field in the Colligo Sites list in Colligo Administrator.

Resolved Issues

Release 5.1 SP2 – November 10, 2011	
Issue #	Description
2480	Users can now drag-and-drop an email into a folder propagated by Colligo Administrator.
2481	The existence of the Branding Key in the registry under HKLM no longer prevents Email Manager from starting up on first launch.

Resolved Issues

Release 5.1 SP1 – November 9, 2011	
Issue #	Description
2452	You can now propagate a favorite from Colligo Administrator that has a title that's different from its URL fragment.
2472	The default install option is now For everyone instead of Just me .
2473	If users have a read-only/write protected C: Drive, the upload process in Email Manager fails. The StorageRoot registry key or STORAGE_ROOT msi property can be used to create a new default download directory for Colligo items (PST file, activation folder and file, and log file) so the upload process is successful.

New Features

Release 5.1 – October 17, 2011	
Reference #	Description
465	Users now have the ability to set the default behavior for drag-and-drop functionality to either move or copy.
466	XenDesktop is now supported.
2126	Users can now activate Colligo Email Manager by email.
2214	Users can now install Colligo Email Manager for the whole machine, rather than just for the current user.
2215	Users can now apply person or group metadata when filing an item.
2218	Users can now apply metadata to multiple items simultaneously.
2219	Users can now file items to a drop-off library or Records Center in SharePoint.
2222	Additional default mapping of Subject and Category metadata fields is now provided. The email subject is mapped to both the Subject and Email Subject fields. The email category is mapped to both the Categories and Email Categories fields.

Resolved Issues

Issue #	Description
1676	Read-only documents can now be successfully uploaded to a SharePoint location.
1699	When users right-click items in the search results list, the contextual menu displays inside the search pane, so any action by the user is successful.
1733	If users enter a number outside the 5 – 50 range limit in the History and Favorites list on the Settings dialog, they cannot exit or close the dialog without entering a number within the specified range.
2023	When users right-click on an item in the search results list and choose the Copy SharePoint Link option, when they past the link into a document, it displays as a hyperlink instead of text.
2050	The Search subfolders check box has been removed from the Search Options dialog. All searches are recursive.
2056	The Categories field now populates when filing an email.
2063	When a user enters incorrect credentials when adding a SharePoint site, the error message indicates that the user credentials are incorrect.
2072	If the Colligo Email Manager Add-In is disabled when Outlook is started, and then enabled, the HTML content that displays at the root folder levels of Colligo Email Manager, Favorites, Folders, and the start-up wizard, now displays.

2077	The Filter by File Type option in the Search Options dialog now returns relevant results.
2103	Date fields in the Edit Properties dialog are no longer marked as required fields by default.
2123	Adding a site with a trailing slash in the URL to the Colligo Sites list in Colligo Administrator no longer results in the site being added multiple times.
2162	CASPOL no longer fails on install with all ALLUSERS=0 during custom action install.
2269	When users upload the same document into a library that requires a document to be checked out prior to editing, the overwrite occurs properly.
2270	When users leave required managed metadata fields blank, the item is not uploaded until the fields are filled in.
2271	Naming conventions for blank email titles is now consistent between Colligo Email Manager and Colligo Contributor.
2321	When users add an Office 365 site, the authentication window no longer displays multiple times.

Feature History

Release 5.0 – August 11, 2011	
New Features	<ul style="list-style-type: none"> • File: Drag-and-drop email and attachments to SharePoint from Outlook • Tag: Add automatic or customized metadata • Find: Search Outlook and SharePoint together • View: See SharePoint content right inside Outlook • Share: Replace attachments with links for easy collaboration

Known Issues

Issue #	Description
1399	If users drag and drop a folder from the Favorites or Folders list into Deleted Items , the folder disappears from the list. However, if users right-click and choose Refresh , the folder they just dragged into Deleted Items displays in the list again.
1549	If users upload 2 or more items to a SharePoint location, if they click Cancel during the first upload, the upload process is only cancelled for the subsequent items. The first item is uploaded.
1620	If users hover their mouse over the Send & File button, the tooltip message says that pressing the F1 key will launch Colligo Online for Outlook. However, pressing the F1 key at this time launches an Outlook help window.
1676	When users upload a read-only document to a SharePoint location, the following error message displays: <i>Failed to retrieve property information for this SharePoint location</i>
1699	In the Search pane, users can use the drop-down menu to configure the Search Options and Locations. In the search results list, users can right-click on an item and use the contextual menu to open an item or send a link to the SharePoint location. Depending on where the Search pane is docked, part of the menus may display outside the Search pane. In these cases, users need to click the part of the menu option that displays within the Search pane. If users click on a menu option outside the Search pane, the action will fail.
1733	In the Settings dialog, users can set the number of items that display in their Favorites and Folders lists. If they enter a number that doesn't fall between 5 and 50, an error message displays. Users can close the Settings screen with the invalid numbers still displaying, but the input isn't saved. When Outlook is closed and re-opened, the Settings screen will display the numbers from the prior session before the invalid ones were entered.
1805	If users select a folder in their Favorites or Folders list and press the Delete key, the folder disappears from the list. However, if users right-click and choose Refresh , the folder they just deleted displays in the list again.
1814	If users view their emails as Conversations and try to use the Move and Copy buttons to file the conversations to SharePoint, an error message displays. However, users can still use the drag-and-drop functionality.
1986	Users are able to edit the names of the SharePoint locations in their Favorites and Folders lists. When these file locations are refreshed, the edited names are overwritten with the

	original names.
1995	When users are viewing a SharePoint location in Outlook and minimize/maximize their Outlook window, there can be a slight delay in the SharePoint page in the action.
1999	If users do not check the Keep Me Signed In checkbox when logging into an Office 365 SharePoint site, they will get a Windows scripting error. The scripting error can be bypassed if the user closes it, but it will re-appear a second time. The user can close it and then re-enter their password to access the site. This will occur every time unless they check the Keep Me Signed In checkbox when they log in.
2008	For users using Vista x64 and Office 2007, Outlook does not display the Search pane according to how it was previously configured after a restart.
2029	Migrating a PST file to SharePoint is not currently supported in Colligo Email Manager. If users drag-and-drop a PST file to a Folder or Favorite location, the PST displays under the Colligo Email Manager group in the Outlook pane. No data is transferred.
2036	<i>For users using XP SP3 and Office 2010, the uninstall process doesn't remove the Colligo Email Manager PST file from Outlook.</i>
2050	If users check the Search subfolders option in the Search Options screen, the scope of the results returned is unchanged.
2056	In Office 2010 x64, the Categories field is not automatically populated during the metadata extraction process. Users can manually edit this field in the Edit Properties dialog.
2057	If users are using the Connect to Outlook button in Internet Explorer to add sites to the SharePoint Sites list, they are able to add duplicate Favorite and Folder locations using this method. If users then remove the entire site location from the list, only one instance of the Favorite or Folder location is removed. Because the home site is no longer there, users can no longer drag-and-drop emails to the folder locations that still display.
2063	When a user enters incorrect credentials when adding a SharePoint site the error message indicates the URL cannot be verified as a valid location.
2064	If search locations overlap, the search results can return duplicate results. For example, if there are two search locations, A and B, with B being the child site of A, the results from B are returned twice – once from search the A site, and once from searching the B site.
2072	If the Colligo Email Manager Add-In is disabled when Outlook is started, and then enabled, the HTML content that displays at the root folder levels of Colligo Email Manager, Favorites, Folders, and the start-up wizard, do not display. The HTML content will display once Outlook is restarted.
2073	If a Favorite location is removed from the Colligo Email Manager group in Outlook, but has had an email recently moved or copied to it, the location still appears in the Outlook Move history. If users select that location from the History list as a destination for a new email, the email is not moved to SharePoint but appears in Recovered Items.
