

Instant Wireless Networking

Colligo
Workgroup
Edition

“[Our professional staff] can go to any location and immediately be a team and become effective. Nationwide, we use this very consistently.”

Dave Johnson
Director of Infrastructure Technology
Grant Thornton LLP

Colligo Client-to-Client Architecture

File Sharing and Messaging Occur Locally,
Eliminating the Need
for Continuous Server Access

Traditional Client-to-Server Architecture

File Sharing and Messaging Rely on
Continuous Server Access

Colligo® Workgroup Edition™ software enables mobile workers equipped with wireless capable laptops to instantly and securely network together no matter where they are working - at the client site, in the field, or on the road. Once connected, mobile teams can transfer files, share folders, collaborate on a document, share a printer, chat, compare calendars, and more.

Mobile workgroups collaborate through a simple process of “Discover, Connect, and Interact.” Workgroup Edition allows WiFi enabled laptops to instantly create server-free, direct, ad hoc networks with a few simple clicks. Gone are slow and frustrating data sharing methods, such as USB key swapping and weak wireless hotspot signals. Reduced dependency on remote access and servers in the field has proven to lower the cost of supporting mobile teams.

Workgroup Edition increases the productivity of mobile teams by enabling them to act on information when and where it is created. Users share data and interact using their existing applications in a secure and reliable environment, regardless of access to the Internet or corporate servers. The result: workgroups confidently and instantly collaborate anywhere.

Secure Instant Networking Anywhere

Workgroup Edition allows mobile teams to easily create an instant wireless network. Mobile workers automatically discover other users in the vicinity and invite them to authenticate into the local network. Users can connect to one or multiple colleagues without any corporate network. It's easy to discover, connect, and interact.

Sharing Files & Resources

Mobile workers can drag-and-drop files to instantly transfer them to colleagues. Teams can securely back up files to shared folders, without access to central servers. This reduces the risks associated with out of date information and ensures that confidential data is not lost on memory sticks. Workgroups can also share resources. They can effectively book team meetings by sharing calendars and print locally by sharing one printer.

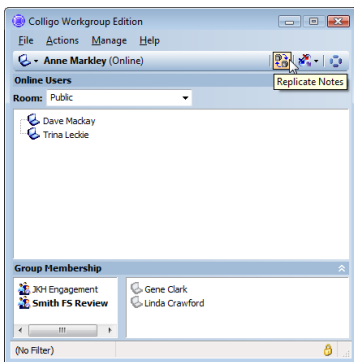

Communication Tools

Mobile teams can effectively communicate using a variety of tools. They can chat in real-time with colleagues. They can use a multi-page whiteboard to share and brainstorm ideas. Mobile workers can even send each other electronic sticky notes. All communication transactions can be saved for future reference. Collaboration is made easy.

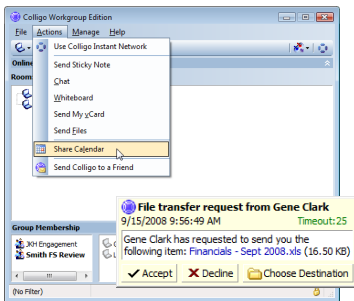

**Secure, wireless, instant networks for workgroups on the go
... wherever they are.**

“By speeding up our data transfer and eliminating the need to create multiple versions of files, Colligo is saving us 90 auditor hours or \$13,000 per month.”

Secure Instant Networking

Colligo Instant Network - With a single “click”, workgroups can instantly configure and create a secure, private, ad hoc network for up to 50 users.

Authentication - Users can easily detect and authenticate colleagues. Colligo’s patented authentication method simplifies today’s complicated standards and eliminates wireless “man in the middle” attacks.

Security - From start to finish, Workgroup Edition connections are secured by 168-bit SSL, the standard trusted for banking and credit cards.

Status Setting - Mobile workers can set their status and see the status of colleagues to facilitate real-time collaboration (status settings: “Available,” “Do Not Disturb,” or “Away”).

Group Creation - Workgroups can organize colleagues in user defined groups for more efficient interaction and viewing.

Sharing Files & Resources

Transferring Files - Users can transfer files and folders with colleagues on the instant network.

Sharing Folders - Workgroups can share local folders, as if they were on the corporate network.

Sharing Printers - A user can share one printer with the entire workgroup.

Sharing Calendars - Users can share contacts (VCards) and Microsoft® Outlook® calendars confidentially, to view free time slots and book team meetings.

Replicating Lotus Notes* - Optionally, workgroups can replicate IBM Lotus Notes® databases without the need for a central server. *Colligo Workgroup Edition for Lotus Notes is required.

Communication Tools

Sticky Notes - Send and receive short Sticky Note messages to others on the instant network.

Real-Time Chat - Mobile workers can participate in direct, real-time dialogs with colleagues.

Whiteboard - A multi-page shared whiteboard supports collaboration and idea sharing.

Archiving Transactions - Transaction logging option enables users to log/archive all sticky notes, file transfers, and chats to their hard drive for future uploading.

Supported

- Microsoft® Windows® XP (Home/Professional) Service Pack 2
- Microsoft® Windows® Vista® (Enterprise/Business/Ultimate),
- Microsoft® Windows® 7 (Ultimate/Professional)
- Lotus Notes® R5, R6, and R7
- Ad hoc network requires 802.11 wireless capability (embedded or expansion card)
