- SharePoint 2010
- SharePoint Online (Office 365)
- SharePoint 2007

Resolved Issues

Release 3.5.1 – September 16, 2013	
Reference #	**Description**
56094262	There was an issue upgrading from Briefcase for Good 3.4 when delegated authentication was enabled. This has been resolved.

New Features

Release 3.5 – August 27, 2013	
Reference #	**Description**
1695	You can now add and edit documents, but you must use Good-approved apps. If you attempt to open a file in an app that is not Good approved, it will fail.
1529	Briefcase now includes an option to set a logging level and an option to email the log file.
1531	IT Managers can now push Office 365 sites to Briefcase users in conjunction with Colligo Administrator.
1552	An Automatic Web Login setting has been added for sites that fail on automatic web login.
1558	If a user adds a new single choice or Boolean values to multiple list items in grid view, the newly populated fields are now pushed successfully to SharePoint on the next sync.
1574	Administrators are now able to set an admin URL in Briefcase for Good using the Good Control web app.
1580	When viewing an item in a library, the Preview pane is now open by default.
1581	After adding a site, the sync activity pop-up no longer displays by default. You need to tap the sync icon to view the sync progress.
1582	When viewing an item in a playlist or in the search results, you can now tap a button to display the item in full screen.
1584	After you enter a URL in the **Add Site** dialog, Briefcase checks if the URL needs a Domain as part of its authentication credentials.
1585	When adding a site, the sync interval, storage limit, and the ability to hide disabled lists are grouped under the Advanced Settings in the **Add Site** dialog.
1586	If you have added a site but have not synced your lists and libraries, this can now be done in the new **Advanced Settings** section.
1587	A new setting, **Sync default lists**, means that when this setting is enabled, default lists are automatically synced; you do not choose which lists/libraries are synchronized when you first add a site.
1588	The bracketed number that previously displayed beside each list/library has been removed.
1589	You can now choose to hide or display lists/libraries that are not synced.

1590	After a site is synced, you can choose to sync specific views for each list/library.
1591	Minor UI improvements have been made.
1592	If you enter characters into the search field, Briefcase filters the top-level content and displays the top three results.
1593	Search results now display in the same manner as playlists; you can select an item in the results and it displays in the right side of the screen.
1603	Briefcase is now available in French, German, Spanish, Italian, Japanese, and Chinese.
1606	Briefcase now supports Contacts lists. You can tap on a contact's mailing address, email address, or phone number to launch an associated app to view their geographic location, to send an email, or to call or FaceTime the contact.
1625	When choosing which lists/libraries to sync, you can now choose to select or deselect all.
1656	The user interface now includes a spinning icon to indicate uploading progress.
1729	Briefcase for Good now uses the Good SDK library version 1.4.4100.

Resolved Issues

Issue #	Description
1435	Previously, if a site was added, deleted, and re-added, the site's metadata and files were downloaded but the content did not display when selected. This has been resolved.
1506	Selecting Email as Link for a list item attachment no longer causes Briefcase to crash.
1518	If Briefcase was set to sync every 15 minutes, sometimes the sync failed. This has been resolved. Multiple sites will now be queued to be synced every 15 minutes.
1522	Some videos were not displaying in full-screen mode. This has been resolved.
1526	IT administrators were unable to set the default sync interval as **Every Open** through Colligo Administrator. This setting is now supported.
1527	If the Preview pane was open, users could not view search results. This has been resolved.
1528	If a Colligo Administrator configuration setting was global but had a Configuration Site Reference, it was not read correctly in Briefcase. This has been resolved.
1533	Users were unable to upload an image as an item attachment while offline. This has been resolved.
1541	If a user rotated the screen when playing a video in full-screen, the video did not rotate to match the screen orientation. This has been resolved.
1542	If a user played a video in full-screen mode, the video couldn't be played again after exiting full-screen mode unless the video is re-selected. This has been resolved.
1543	If a user played a full-screen video on an iPhone 5, the display is black with a title bar at the top of the screen. This has been resolved.
1546	If a user attempted to upload 2 attachments while offline, the first attachment was successful but the second attachment failed. This has been resolved.

1550	If a user selected Global Settings on the apps first launch with no sites in the site list, Briefcase would freeze. This has been resolved.
1558	If a user adds a new single choice or Boolean values to multiple list items in grid view, the newly populated fields are now pushed successfully to SharePoint on the next sync.
1564	The Email as Attachment now works properly for list item attachments.
1569	Colligo Administrator now supports groups in the Applicability field when pushing configuration settings to Briefcase.
1669	When using Colligo Administrator, the **Sync on 3G** setting was not functioning properly. This has been resolved.
1682	On the iPad mini, when you were adding a site, when you selected the Domain field the keyboard obscured the field. This has been resolved.
1690	If you attempted to change a passcode in global settings while in landscape view, the bottom half of the **Change Passcode** dialog was cut off. This has been resolved.
1692	On the iPad mini, when adding a site, the keyboard obscured the credential fields. This has been resolved.
1734	On the iPhone, if you tapped the arrow beside a list or library to go into the settings screen and tapped the action item menu, there was no **Cancel** button in the options presented. This has been resolved.
1821	The native Briefcase passcode feature is no longer supported in the app. Only the GOOD passcode is supported.

New Features

Release 3.4 – March 6, 2013	
Reference #	**Description**
1227	Colligo Briefcase now supports Good Dynamics. Good Dynamics enables secure connections between mobile clients and application servers that are behind the enterprise firewall.

Known Issues

Issue #	Description
1404	This release supports one-way sync only.
1519	In this release, users are unable to preview mp4 files.
