Contributor Pro 6.1 SP1

Release Notes

Contributor Pro System Requirements

Operating System

Contributor Pro runs on the following versions of Windows:
- Windows 8
- Windows 7
- Windows XP Professional
- Windows Vista

Software Requirements

Contributor Pro is compatible with the following software:
- Microsoft Office 2007, 2010 SP1, or 2013 (32-bit or 64-bit edition)
- Internet Explorer 7 or higher (optional)
- Windows 2008R2 Server (for Terminal Services)

Contributor Pro also requires the following supporting software on the client machine:
- Microsoft .NET framework 3.5 Runtime
  - http://www.microsoft.com/en-us/download/details.aspx?id=21
- Microsoft .NET framework 4.0 Runtime
  - http://www.microsoft.com/download/en/details.aspx?id=17718
- Microsoft Visual C++ 2010 Redistributable Package
  - 32-bit Operating System: http://www.microsoft.com/download/en/details.aspx?id=5555
  - 64-bit Operating System: http://www.microsoft.com/download/en/details.aspx?id=14632
- Visual Studio Tools for Office (VSTO) 2010
  - http://www.microsoft.com/en-us/download/details.aspx?id=35594
- Microsoft Office PIAs
  - Office 2013: check with Microsoft for Office 2013 PIA availability
  - Office 2010: http://www.microsoft.com/download/en/details.aspx?id=3508
  - Office 2007: http://www.microsoft.com/download/en/details.aspx?id=18346
- Windows Identity Foundation: http://www.microsoft.com/en-ca/download/details.aspx?id=17331
  NOTE: Windows Identity Foundation (WIF) is not supported in Windows XP, so it is not necessary to install it if you are using XP. For Windows Vista/ 7/8, WIF is required to handle Colligo Administrator authentication through ADFS.

Server Software Requirements

Contributor Pro supports connectivity with any of the following editions of SharePoint:
- Microsoft SharePoint Server 2010 or 2013
- Microsoft SharePoint Server 2007 (not supported by Email Manager Connected Mode)
- Microsoft SharePoint Foundation 2010 or 2013
- SharePoint 2013/2010 Online (Office 365)
- (Optional) Microsoft FAST Search Server 2010 for SharePoint

Hardware Requirements

Contributor Pro has the following hardware requirements:
- Windows-based PC (Minimum: 1 GHz processor, 500 GB HDD, 1 GB RAM)

Resolved Issues

Release 6.1 SP1 (build 6.1.21.0) January 24, 2013	
Issue #	**Description**
43074927	In Email Manager, when the Configuration dialog was displayed, sometimes the dialog would snap to the back of the application and the online view of the product was displayed. The dialog wouldn't re-appear until the user clicked inside Outlook. This has been resolved.
60116958	In Email Manager, some white labeling settings were not being applied. A new registry script which defines these settings is available in the White Labeling guide.
60272262	If Contributor Pro was installed with an Enterprise Viewer license, the **Version History** option was disabled in the contextual menu in version-enabled libraries. This has been resolved.
60374220	When a user selected multiple items, **Version History** was still a clickable live link in the contextual menu. The result of clicking on the option was to display the version history of the first item in the list. The Version History has been greyed out when multiple items are selected.
60817994	Using the **Save As** function from within Outlook to save into Briefcase for Windows did not trigger a synchronization. This has been resolved. Direct uploads to SharePoint through Email Manager do not trigger this issue.
61254252	There was an issue with multiples copies of a single file being created during the Save process because of documents that contained illegal SharePoint characters; this caused the synchronization process to generate many copies of the same document. This issue has been resolved against all platforms except for Windows XP. Valid file or folder names cannot begin or end with a dot, cannot contain consecutive dots and cannot contain any of the following characters: ~ " # % & * : < > ? / \ { | }.
61440568	If a system's local settings used dd/mm/yyyy for its date formatting, versioning history would fail on any item with a last modified time on a day greater than the 12th of any month. This has been resolved.
61571158	The Copy SharePoint URL function was not updating correctly after a folder was renamed. That is, the URL was not updated to reflect the name change and still pointed to the previous name. This has been resolved. *NOTE*: the updated URL will only display after a sync is performed.
61778114	If a user created a view in SharePoint that uses the *is not equal to* operator on a managed metadata column (managed in a term store) the view did not function properly in Contributor Pro. This has been resolved.
61781708	Lookup Columns that had null **ShowField** or **lookupField** attributes did not show up in the **Edit Properties** dialog. This has been resolved.
63830862	Opening specific file versions using the **Version History** command caused the Briefcase application to crash if the file had a .ppt or .pptx extension. This has been resolved.
63994686	In some cases, the first download of a site on a fresh installation caused Briefcase for Windows to show an error message. This has been resolved.

Resolved Issues

Release 6.1 (build 6.1.9.0) November 20, 2013	
Issue #	**Description**
51101741	If a user manually typed in a complete email address when using the Send-and-File feature, the action failed. This has been resolved.
52883273	When copying an email into a Document Set with over 5000 items in the library, the metadata was not applied.
56827822	Sometimes if a user was editing multiple properties in the **Edit Properties** dialog, other fields that were not being edited would be changed. This has been resolved.
56831298	When copying or moving items between folders in the same document library, the item properties were not retained. This has been resolved.
57396152	Colligo Administrator was not successfully pushing Launchpad settings to Email Manager. This has been resolved.
57421266	When Email Manager launches, the software writes to the Internet Explorer Emulation Mode key. You can override this with the following configuration setting: http://www.colligo.com/support/setting/web-browser-emulation-mode
57502416	When copying a single email to SharePoint using Email Manager Connected mode, the upload was successful. When two emails were uploaded, the item properties were not retained even though the items were successfully uploaded. This has been resolved.
58040438	After Briefcase for Windows is installed for the first time, the Briefcase desktop shortcut was not launching the product.
58545688	When working offline, all taxonomy fields were disable in the **Edit Properties** dialog for a new or existing document. This has been resolved.
58658858	In Email Manager, if the display name of a library was different from its URL, an error message saying: **A connection to the server is required for this operation** displayed. This has been resolved.

New Features

Reference #	Description
53006929	The Sync Issues pane now only displays only when a sync issue is present.
53007241	When an item has not been uploaded to SharePoint, the **Copy SharePoint URL** option in the right-click contextual menu is greyed out.
53007717	You can now access the Version History of an item from the right-click contextual menu. This feature only functions when you are connected to your SharePoint server.
53015265	If you choose the **Copy SharePoint URL** option in the right-click contextual menu, the link now includes a version number that indicates what version the local copy is. This reflects the version number before the item is synced to SharePoint.
54069613	You now have the option to prevent Colligo Administrator from pushing Launchpad settings to Email Manager. For more information, please see the following setting:

	http://www.colligo.com/support/setting/prevent-colligo-administrator-launchpad-push/
56374212	It is now possible to perform a silent install of Email Manager Connected mode.
56453956	Colligo Administrator now supports non-default Windows authentication with Briefcase for Windows. **NOTE**: ADFS is not currently supported.

Resolved Issues

Release 6.0 SP4 (build 6.0.86.0) September 9, 2013	
Issue #	**Description**
47781387	During the activation process, multiple instances of Colligo Briefcase could launch. This has been resolved. Now, only a single instance of the application can run.
48956599	Radio buttons or checkbox choice fields in the **Edit Properties** dialog now have a fixed height with scrolling capability. This is for improved usability.
49038639	In Colligo Email Manager Connected mode, when a user uploaded an item to a library that had two different content types each containing a different Managed Metadata field, an **Action Failed** message displayed. The file was uploaded, but all metadata fields were blank. This has been resolved. However, the same issue still applies when uploading multiple items in the same scenario. This is a known issue. Currently, the workaround is to select each email in the **Edit Properties** dialog and click in the Managed Metadata field and click away. This will make the upload successful.
49239553	When filing multiple items to a list location, no item names were displayed in the left column of the **Edit Properties** dialog. This has been resolved.
52751287	After a migration happens, the Search and Favorite locations are now defined explicitly (entire path rather than just the library name) in the migration dialog.
52882835	If users drag-and-drop an item to a SharePoint location they do not have permission to access, the error message now explains the nature of the Action Failed error message with a tooltip reading *You do not have access to this SharePoint location*.
53482535	If users used the X button to close the Search pane, it was still visible on restart. This has been resolved. *NOTE*: for Office 2007 users, this is still an issue. Users must use the **Search** button to toggle the search pane display on restart of Outlook.
53926185	In Colligo Briefcase for Windows, when a user edited multiple list items in **Group Edit** mode, text fields that allowed RTF-formatting were being stripped of their formatting attributes. This has been resolved.
54296218	If an error occurs during an upload in Email Manager Connected mode, the option to *Close dialog when uploads are complete* is now ignored so users can view why the error occurred.
54475200	SharePoint 2013 migrations, which follow the **Search First Migration** (http://technet.microsoft.com/en-us/library/dn130132.aspx) pattern, now allows users to search SharePoint 2010 content. For more information about this setting, please see the following link: http://www.colligo.com/support/setting/overridingsearchsyntaxversion
54476804	If Colligo Administrator was configured to push SharePoint Site Content where the Site Collection URL is not the server URL, the push operation failed. This has now been resolved.

	Release 6.0 SP4 (build 6.0.86.0) September 9, 2013
54810244	When a user performs a Save As operation for a file opened in Colligo Briefcase for Windows, they are now properly re-directed to the Colligo Briefcase for Windows location.
54914454	When the **Edit Properties** dialog is suppressed, if an item was uploaded to a location where that item already existed, the **Edit Properties** dialog still showed. This has been resolved.
54930680	In Email Manager Connected mode, if the **Edit Properties** dialog was suppressed (EnableMetadataPrompt=0) and a user dragged-and-dropped an item to a location, a dialog displayed with the text *Retrieving property information from SharePoint.* If the user clicked the X button to close the dialog before the information retrieval was completed, a blank upload progress dialog displayed. When the user closed the second dialog, an Action Failed message displayed. This has been resolved. Now, when a user closes the first window, the upload process is cancelled. No other dialogs or messages display.
55019570	In the Configuration dialog, if a Favorite location file path was too lengthy, it was cut off and there was no way for users to see the tail end of the path. Now, if the path is truncated, users can hover over the location and see the full path in the tooltip.
55319734	When using Colligo Email Manager Online mode with the **Edit Properties** dialog suppressed (EnableMetadataPrompt=0), if a user dragged-and-dropped an item to locations affected by the **Content Organizer**, an empty dialog box displayed after retrieving property information from SharePoint. The dialog box remained until the user clicked the X to close it. The file upload was successful. This experience has been resolved so there is no longer a blank dialog box in the process.

New Features

Reference #	Description
52836157	The build number and release version are now visible on the **About** screen.
53646237	Users can now enable and disable the **Edit Properties** prompt on individual locations added as Favorites in Colligo Email Manager. They can do this by right-clicking a Favorite location in the Email Manager PST and using the menu option **Prompt for Properties** or **Don't Prompt for Properties**. This functionality is also accessible through the toggle in the Favorites tab in the Configuration dialog.
54047143	Colligo Contributor Pro is now available in French, Spanish, and German.

Resolved Issues

Release 6.0 SP3 (build 6.0.74.0) July 29, 2013	
Issue #	**Description**
49518447	Colligo Email Manager was causing a conflict on the shutdown of Outlook 2007 with Live Meeting 2007. This has now been resolved.
49563179	After the migration process, the Search locations and Favorite locations that have been migrated successfully are now displayed.
49692015	Previously, Colligo Email Manager detected the availability of SharePoint sites based on exchange connectivity. Now, it checks the connectivity of each SharePoint site individually. For more information on this registry setting/MSI property, see the link below. Note: the default timeout is set to 5 seconds. Colligo does not recommend changing this. http://www.colligo.com/support/setting/detecting-connectivity/
50093253	In Colligo Email Manager, users can now use "-" and "+" and "|" as literal search terms. These are no longer treated as search operators.
50902801	The following changes have been made to the behavior of both Colligo Briefcase and Colligo Email Manager: • On discarding a check out, instead of reverting back to the previous version number, Contributor Pro waits for the next synchronization before reverting. • Uploading a duplicate file no longer results in the sync dropping. If the overwrite confirmation is given, the file successfully syncs to SharePoint. • During a sync, when a remote change in SharePoint necessitates a move of a file in the local file system due to an unresolved conflict, invalid filename, or file system access issues, the file is no longer disconnected from future syncs.
50919139	When connecting to a SP site via a relative URL redirect (eg. connecting from a home network through a proxy, and the URL provided to the user is relative to the proxy), Colligo Briefcase and Colligo Email Manager crashed. This has been resolved.
50919291	When uploading an item to SharePoint 2010 or 2013, the value entered in a field named **Keyword** is now applied to the field on the SharePoint site.
52505585	A document can no longer have a content type set to Folder; a Folder can no longer have its content type set to document. These rules apply to parent-inherited content types; eg. document sets and folders, and documents and document-derived content types.

Resolved Issues

Release 6.0 SP2 (build 6.0.68.0) June 13, 2013	
Issue #	**Description**
45994507	Previously, users were able to create folders inside a document set from within Colligo Briefcase. This functionality is now disabled.
47125323	When inputting metadata values for Hyperlink and Picture fields in the Colligo Email Manager **Edit Properties** screen, the values were not retained when moving from one file to the other and back again. This issue has been resolved and values entered for those fields are now retained.
47143867	In the Colligo Email Manager **Edit Properties** screen, if more than 2 fields had drop-down menus with multiple options to choose from with no assigned default value, the user saw the following value error in the field: 'Colligo.Runtime.Classes.ChoiceItem.' This issue has been resolved.
47493681	If a user used the **Connect to Email Manager** button to connect a SharePoint site to Colligo Email Manager, the tool did not shut down and was left running in the background. This issue has been resolved.
47550469	In Colligo Email Manager, if a user expanded a site to drill down to a subsite, all other configured SharePoint sites that were expanded collapsed. This issue has been resolved.
47646683	If a subsite with white space in the name was added, it could not be removed in Colligo Email Manager Offline mode. This issue has been resolved.
47647097	If the **Connect to Email Manager** button was used to add a Favorite or Folder under a subsite with whitespace in the name, the Favorite or Folder was not added successfully. This issue has been resolved.
47936149	If a user added a Colligo Email Manager Favorite or Folder through the **Connect to Email Manager** button in Internet Explorer when the location is a root site, the resolved site in Email Manager pointed to the specific location rather than the parent site itself. This issue has been resolved.
48419997	In the multi-item metadata editor in Colligo Email Manager, users can 'select none' by holding down control on the metadata editor. This created an error when users then tried to enter values in the fields. This issue has been resolved.
48688555	For deployments that utilized re-branding, the CONTRIBUTOR_SHORTCUT_NAME branding key did not apply to the Start Menu item. This has been resolved and any text entered as the value for this key now displays in the Start Menu.
48741573	For deployments that used Colligo Administrator to push Favorites to Colligo Email Manager in Connected Mode, any items filed to the location were not uploaded. This issue has been resolved.

48777833	In Briefcase for Windows, IT administrators did not have the ability to change the storage location. Administrators now have the ability to change this to their preferred location. ***NOTE***: it is necessary to restart the system for the Windows Explorer integration to properly take effect.
48778267	The Configuration dialog in Colligo Email Manager previously used Exchange availability to determine if a user could connect to SharePoint or not. This has now been changed to check the actual connection to SharePoint.
48779151	If users were upgrading from Contributor 4.x or Email Manager 5.x to Contributor 6.0, search locations were not detected and included in the migration process. This has been resolved and search locations are now included as part of the upgrade/migration process.
48922853	When users tried to file an email that had a Tab character in the subject line, the Colligo Email Manager **Edit Properties** screen displayed as blank. This issue has been resolved.
49169907	When a user tried to open an item from the search results list in Colligo Email Manager using either a double-click or a right-click > **Open** action, the file did not open. This issue has been resolved.
49549449	When a user selected multiple items in the **Edit Properties** screen and clicked on a text field but did not enter any text, any information previously saved in the field was lost. This issue has been resolved.
49690239	When a site was added to Colligo Email Manager from Colligo Administrator, the site was not added as a Search Location. This issue has been resolved.
50487095	If Colligo Email Manager settings were controlled by Colligo Administrator but a user did not have connection to it, the application prompted the user to enter credentials on the start-up of Outlook. The authentication pop-up no longer displays when the user cannot connect to Colligo Administrator.
50549257	In Colligo Contributor Pro, the HiddenMetadataFields registry entry did not work. This issue has been resolved.
50551245	When adding multiple sites at once in Colligo Email Manager, there are missing icons beside the site names. This issue has been resolved.
50903133	In Colligo Email Manager, if a user opened an item in the search results list that was not fully downloaded, the action failed. This issue has been resolved.
50919033	The Colligo Briefcase and Colligo Email Manager Sync Panel are now minimized to the task tray on Windows startup.
51245475	Colligo Email Manager Connected Mode no longer fails when uploading files to a SharePoint location that contains a Managed Metadata field with a default value and is hidden by the HiddenMetadataFields setting.
51255035	Colligo Email Manager and Colligo Briefcase for Windows now correctly interpret SharePoint Office 365 sites that were configured subsequent to Microsoft updates to their SharePoint Office 365 servers.
51527907	Business Connectivity Services (BCS) fields now display in the Edit Properties screen in Colligo Email Manager Connected Mode.

Resolved Issues

Release 6.0 SP1 (build 6.0.56.0) May 3, 2013	
Issue #	**Description**
49148081	There was an error with IE site connect in Email Manager Offline mode. This issue has been resolved.

New Features

Release 6.0 SP1 (build 6.0.54.0) May 2, 2013	
Reference #	**Description**
43089731	When users have no connectivity, the search feature in Email Manager displays an error message.
48005881	Email Manager can now connect through ADFS to use Colligo Administrator.
48006541	By default, the ability to select multiple items in the metadata editor is enabled. To disable this setting, see: http://www.colligo.com/support/setting/ disable-multi-select-feature-in-metadata-editor
48007145	Email Manager now supports Office 365 authentication re-directs to a local ADFS server. Users must specify their own Office 365 credentials when adding an Office 365 site.
48008861	Email Manager now supports Administrator in all Colligo-supported authentication modes. See here for a list of supported authentication schemes: http://www.colligo.com/support/kb/what-sharepoint-authentication-methods-are-supported/
48180349	Briefcase for Windows can now exceed the List View Threshold and List View Lookup Threshold simultaneously. This setting is off by default. To enable this setting, see: http://www.colligo.com/support/setting/enable-list-view-threshold-override

Resolved Issues

Issue #	**Description**
41682131	Briefcase for Windows did not respect environment variables (eg. [username]) for the Storage Root registry value. This issue has been resolved.
42655003	The Configuration dialog in Email Manager had out-of-date tooltips when the status of a location changed from not synchronized to either **Upload Only** or Offline. This has been resolved.
43975981	An issue where Managed Metadata terms contained a trailing semi-colon (;) on Managed Metadata Terms when viewing metadata has been resolved.
43977281	Previously, if the **Send-And-File** feature in Email Manager was used, metadata was not applied if the **Subject** field of the email was blank. This has been resolved. This is a resolution of a previously documented Known Issue 43977281.

45366939	Previously, if users altered the maximum number of Favorites and History items in Email Manager, the changes would not persist after Outlook was restarted. This has been resolved.
46317455	Occasionally, Managed Metadata defaults set at the folder level in SharePoint would not apply to uploaded items. This has been resolved. This is a resolution of a previously documented Known Issue 46317455.
46747625	During the migration process from Email Manager 5.5 to Email Manager 6.0, the ADFS Registry configuration was not being migrated. This has been resolved.
47024411	If a user used the **Connect to Email Manager** button to add an Email Manager Folder that pointed to the same SharePoint location as an existing Folder, an error occurred. This has been resolved.
47065019	In the Email Manager Offline view, there were multiple occurrences of the **New**, **Upload**, and **Filter** menus. This has been resolved. This is a resolution of a previously documented Known Issue 47065019.
48210983	In some cases, an error occurred when dragging-and-dropping items directly from the **Recovered Items** folder into an Email Manager Favorite or Folder location. This has been resolved.
48211331	In some instances, in Email Manager users could not file emails with embedded images. This has been resolved.
48271013	Office 365 sites that contained redirects could not be added to Email Manager even when the site was accessible through Internet Explorer. This has been resolved.
48431151	Any fields that were hidden in SharePoint were not hidden in Contributor Pro. This has been resolved.
48761821	If there were spaces before or after the license key when users entered it in the installer, it was considered an invalid key. This has been resolved. *NOTE*: trailing or leading white space in the MSI property will still result in the key being read as invalid. This resolution is specific to the guided installer.
49094291	In certain situations, when Email Manager was installed in Offline Mode, users were unable to upload files. This has now been resolved.

New Features

Release 6.0 (build 6.0.44.0) April 15, 2013	
Reference #	**Description**
0000001	*Email Manager Offline Mode* now supports viewing and filing SharePoint content and email while offline.
0000002	New icons (upload-only folder vs. offline folder) now display to represent the respective states of the SharePoint locations.
0000003	The two products that are bundled together to form Contributor Pro share a single SharePoint configuration setting.
0000004	*Email Manager* and *Briefcase for Windows* now have the same Metadata support.
0000005	Authentication types supported now include Windows (default and non-default), Windows mixed mode (form-based and Windows default and non-default), Form-based, Office 365, and ADFS2.0

Known Issues

Issue #	Description
0000006	German, French and Spanish language are currently not supported
0000007	SharePoint 2007 is currently not supported in *Email Manager Connected Mode*.
0000008	There is no ability to change the storage location in *Briefcase for Windows.*
0000009	IE site connect only supports SharePoint sites with default Windows credentials in *Email Manager Offline Mode.*
0000010	There is no ability to add a term to a managed metadata set in *Email Manager Offline Mode.*
0000011	Adding an attachment from SharePoint when sending an email is only supported when users have a network connection in *Email Manager.*
0000005	There is no ability to filter folders when a user navigates the SharePoint hierarchy in *Email Manager Offline Mode.*
46317455	The ability to apply default metadata at the folder level is not supported in *Email Manager Offline Mode.*
46317455	The ability to prompt the metadata editor at the folder level is not supported in *Email Manager Offline Mode.*
43977281	If an email with a blank subject line is sent using the Send and file feature, metadata will not be applied in *Email Manager Offline Mode.*
47065019	The top menu bar in the offline SharePoint view displays multiple times in *Email Manager Offline Mode.*
47936149	When using IEsiteConnect for Office365 in *Email Manager Connected Mode*, a library may be added as a site.
