## WHITE LABELING

This document describes the fields and locations in Colligo Email Manager that you can brand with your company name and information, and provides a script with the keys that you can add to your registry.

## REGISTRY PATH AND LICENSE KEY

All registry keys for Colligo Email Manager are located at the following file path:  
HKCU\Software\Colligo\EmailManager.

There are no shortcuts in the start menu or desktop for Colligo Email Manager, because it is not an independent application. Therefore, all branding settings are done using the registry. You can also configure the registry MSI properties for each setting so the registry values can be set at install time.

### Enabling Branding

To enable branding, you need a branding-enabled license key, which you can purchase from Colligo.

You have two options to modify the branding locations in the product:

- Add the branding settings to the MSI file and deploy the file to all users: see **Using the MSI**
- Update your users' registries with the branding registry keys: see **Using Registry Settings**

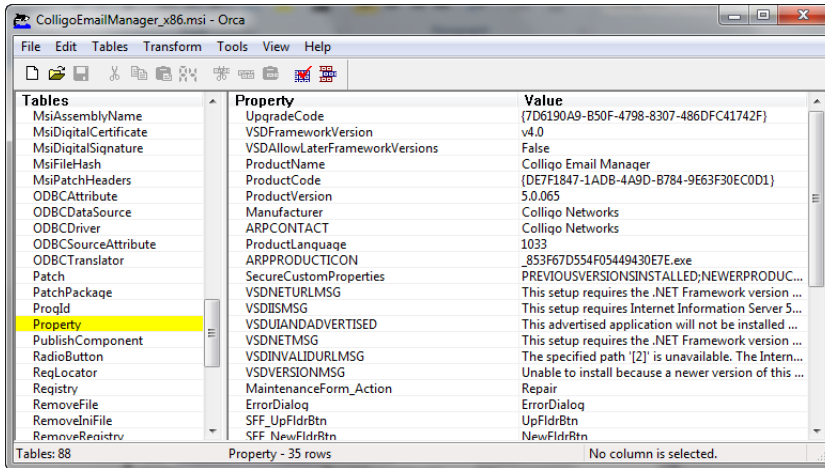

### Disabling Branding

To disable branding you can install a license key that doesn't include branding capability, or you can set the registry key **EnableBranding** to **0**.

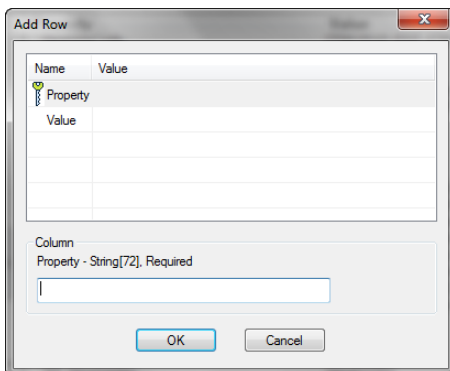

## USING THE MSI

To update the MSI file:

1. Download and install Orca, a Microsoft MSI editor, from the following location:  
<http://support.colligo.com/Lists/Knowledge%20Base/DispForm.aspx?ID=4>
2. Open the MSI file in Orca.
3. Navigate to the **Property** table in the **Tables** list.

4. From the **Tables** menu, select **Add Row**.  
The **Add Row** dialog displays:

5. Enter the **Property** name and **Value**.
6. Click **OK**.  
The new property displays in the Property Table.
7. Using this approach, add all the relevant properties listed in **Using Registry Settings**.

## USING REGISTRY SETTINGS

The following text is the registry script for the branding locations.

```
Windows Registry Editor Version 5.00

[HKEY_CURRENT_USER\Software\Colligo\EmailManager]

[HKEY_CURRENT_USER\Software\Colligo\EmailManager\Branding]
"About"="About XYZ"
"Product"="XYZ Email Manager"
"Help"="XYZ Help"
"Search"="Search XYZ"
"RibbonGroup"="XYZ"
"RibbonTab"="XYZ"
"OptionsDialog"="XYZ Options"
"EnableBranding"="1"
```

These keys are not present by default in the registry.

To add them:

1. Copy and paste the script into Notepad.
2. Save the file as **.reg**.
3. Double-click the file to open it and add to the registry.
4. Enter your company name or the preferred wording in the second half of each key.

## BRANDING PROPERTIES & LOCATIONS

The following table describes the property names and registry keys for the different instances of branding throughout Email Manager.

Usage	MSI Property Name	Registry Key	Default Value	Format
Enable Branding functionality	ENABLE_BRANDING	EmailManager\Branding\EnableBranding	"1" = enabled	0 or 1
Name of PST file as shown in Outlook	ROOT_FOLDER_NAME	RootFolderName		
Name of Email Manager group on Outlook home ribbon tab and Email Manager tab	BRANDING_RIBBON_GROUP	EmailManager\Branding\RibbonGroup	(empty)	Text
Name of Email Manager tab in Outlook ribbon	BRANDING_RIBBON_TAB	EmailManager\Branding\RibbonTab	(empty)	Text
About button name and about dialog	BRANDING_ABOUT	EmailManager\Branding \About	(empty)	Text
Product name as shown in About dialog	BRANDING_PRODUCT	EmailManager\Branding \Product		
Caption of Help button	BRANDING_HELP	EmailManager\Branding \Help	(empty)	Text
Title of Search pane	BRANDING_SEARCH	EmailManager\Branding\Search	(empty)	Text
Title of options dialog	BRANDING_OPTIONS_DIALOG	EmailManager\Branding\OptionsDialog	(empty)	Text
Need help text in About dialog	BRANDING_NEED_HELP	EmailManager\Branding\NeedHelp	(empty)	Text
Product support URL in About dialog	BRANDING_PRODUCT_SUPPORT_URL	EmailManager\Branding\ProductSupport Url	(empty)	Text
Launchpad Ribbon	BRANDING_LAUNCHPAD_CONFIG_GROUP	EmailManager\Branding\Launchpad		

**NOTE:** The Outlook root folder name property (ROOT\_FOLDER\_NAME) is configurable without a branding license key.

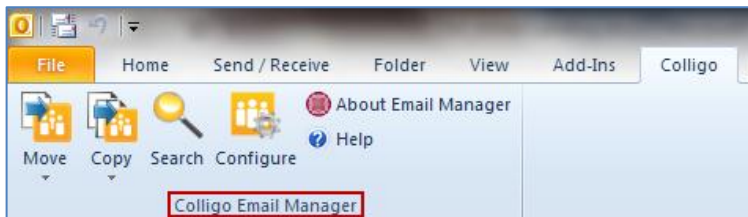

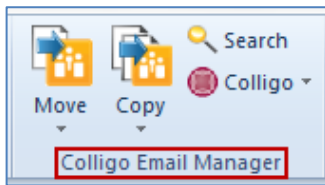

## Root Folder Name

The registry key *RootFolderName* displays in the following location:

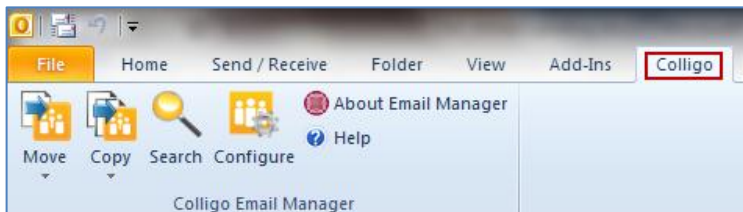

## Ribbon Group

The registry key *EmailManager\Branding\RibbonGroup* displays in the following locations:

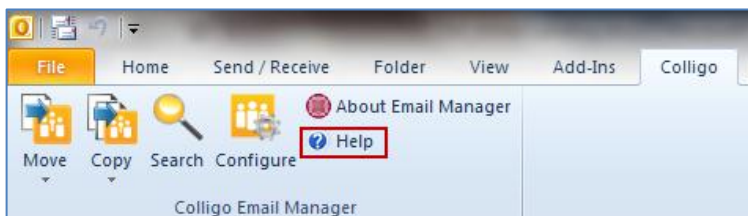

## Ribbon Tab

The registry key *EmailManager\Branding\RibbonTab* displays in the following location:

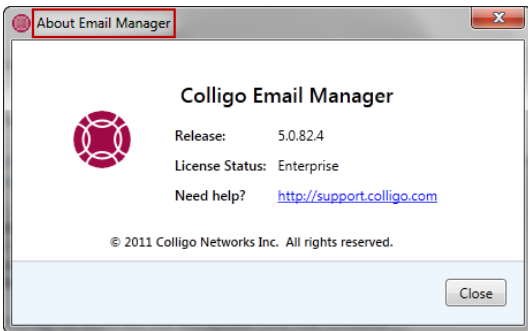

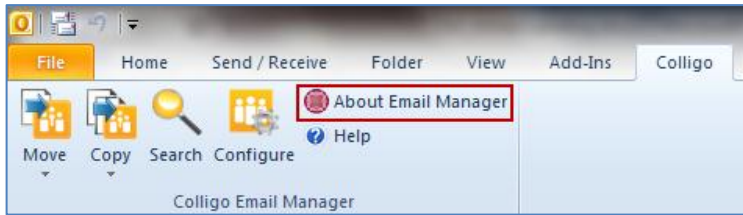

## Help

The registry key *EmailManager\Branding\Help* displays in the following location:

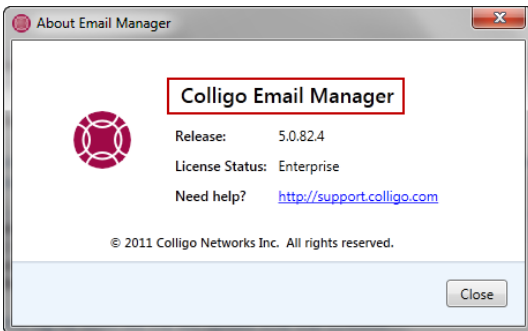

## About

The registry key *EmailManager\Branding>About* displays in the following locations:

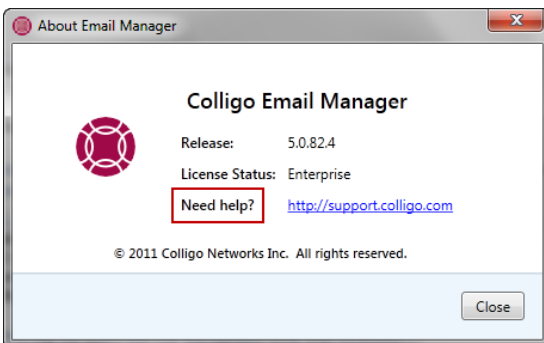

## Product

The registry key *EmailManager\Branding/Product* displays in the following location:

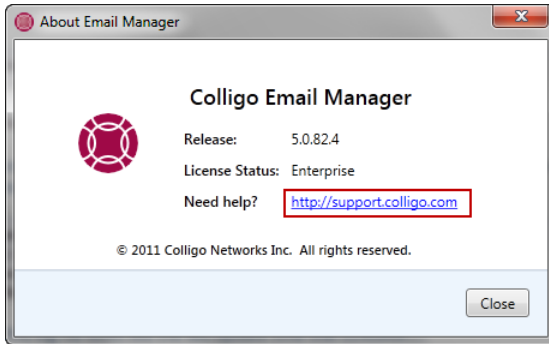

## Need Help

The registry key *EmailManager\Branding\NeedHelp* displays in the following location:

### Product Support URL
