Colligo Console

Central Administration for all Colligo Apps

Colligo Console is the administration companion to Colligo apps. It connects administrators directly to user devices to enable central configuration management and compliance monitoring.
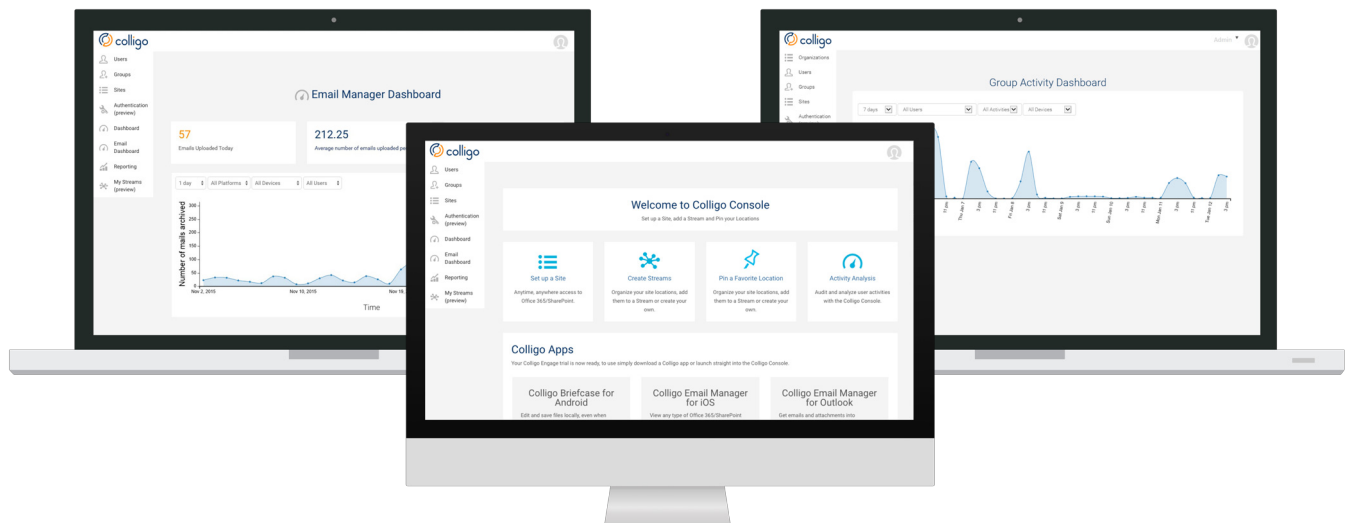

The Console is an administration service that is built on Microsoft Azure, a highly secure cloud computing platform.

Content, user and device activity data is collected but all corporate content remains in place on the organization's systems. No content is copied or moved.

Colligo Console access is available with all Colligo apps.

Benefits:

- Support BYOD without compromising information management compliance.
- Centrally configure users and settings.
- Push content to user groups and devices.
- Centrally set policies and monitor compliance.
- Track user activity and compliance through rich analytics and reporting capabilities.

Features: Colligo Console

Central Management	• Manage user and group configurations • Add users to Console: automatically through AD integration or directly within Console (one-by-one or by list import) • Push SharePoint and Office 365 sites to specific groups, users and authorized devices • Configure sync settings and push records management policies • De-authorize devices or users • Pin a favorite location
User Authentication	• Configure ADFS or Azure AD for user authentication • Single Sign-On (when using Azure AD)
Analytics Dashboard	• Access detailed user activity logs and reports • Audit and analyze user activities • Monitor user adoption and compliance • Monitor usage activity by user or group, type of activity (edit, read, share or sync), device and by time period
Email Manager Dashboard	• Monitor number of archived emails by platform, device, group and time period • Monitor number of archived emails by location
Reporting	• Export .csv of detailed user activity
