## INTRODUCTION

This User Guide is designed to serve as a brief overview to help you get started. There is also information available under the Help option in the various Contributor interface toolbars. If necessary you can access the Help by launching the Contributor interface from the System Tray and selecting **Help > Help and Support**.

If you would like further instructions, please consult the Features list at

<u>http://support.colligo.com/Lists/Features/AllItems.aspx</u> where you will find a complete list of features by product along with instructions for use. You can find a number of <u>screencasts</u> on the support site that walk you through the main product features. The SharePoint support site can be synchronized with Colligo Contributor for access at any time, online or offline. Please follow the instructions on the home page at <u>http://www.colligo.com/support/</u>.

Please send questions and feedback to <a href="mailto:support@colligo.com">support@colligo.com</a>.

## **TECHNICAL REQUIREMENTS**

#### **Systems Supported**

- Microsoft<sup>®</sup> Windows<sup>®</sup> 7 Home Premium; Professional or Ultimate
- Microsoft<sup>®</sup> Windows<sup>®</sup> Vista Business; Enterprise or Ultimate
- Microsoft<sup>®</sup> Windows<sup>®</sup> XP Home or Professional
- Microsoft Office 2003 2010 (Office 2003 SP2 or later for InfoPath forms)
- Internet Explorer 6.0 or later
- SharePoint Server 2010, MOSS 2007 and SPS 2003; SharePoint Foundation and WSS (2.0 or 3.0); SharePoint 2010 Online (Office365) and BPOS
- Consumes roughly 20MB of disk space, not including content
- If you are running a previous version, the new version can be installed over top of the old version without an uninstall. This also preserves all of the cached content.

#### **Application Prerequisites**

• Microsoft<sup>®</sup> .NET framework 3.5 Runtime

#### **Outlook Add-in Prerequisites**

- Compatible version of Outlook (Outlook 2010, 2007 or 2003)
- Office 2003 or Office 2007 Primary Interop Assemblies (depending on which version of Office is installed)
- Microsoft Visual Studio 2005 Tools for Office Second Edition (VSTO 2005 SE) Runtime
- Microsoft Visual C++ 2008 SP1 Redistributable Package

## **INSTALLING COLLIGO CONTRIBUTOR**

Colligo provides both an .exe installer and an .msi installer for Contributor.

There are different installer packages dependent on which version of Office you have installed:

- For 32-bit Office, use the x86 installer
- For 64-bit Office, use the x64 installer

#### **EXE Installer**

This installer package is an executable file with the following key features:

- Supports interactive install only (does not support silent install)
- Automatically installs software prerequisites (downloaded from www.colligo.com)
- Not customizable

#### Interactive EXE Install

**NOTE**: Microsoft Outlook must be closed for the installation to be successful.

- 1. Double-click the installation file.
- 2. Prerequisites are downloaded and installed.
- 3. Enter your license key.

Colligo Contributor can be set to launch at Windows Start Up. This enables the background synchronization to start automatically.

#### **Terminal Server Install**

For information on installing in a Terminal Server environment see the Colligo Contributor Terminal Server User Guide.

#### **Concurrent Version Installations**

Colligo does not support side-by-side installations, running multiple versions or different versions of Contributor.

#### **Version Reversion/Downgrading**

It is not possible to revert to an earlier version of Contributor after upgrading, as the database is often updated.

## THE OUTLOOK ADD-IN

#### Adding a Site to Outlook

It is possible to add a site to Contributor in a number of ways, including:

- Use the Connect to Outlook option in Internet Explorer
- Site > Download Site menu option
- Click the site selector drop-down and select **Download Site...**
- Drag-and-drop a URL from Internet Explorer Into Contributor

#### Internet Explorer Toolbar Connect to Outlook Button

- 1. Navigate to a SharePoint List or Library in Internet Explorer.
- 2. Click the yellow **Connect to Outlook** icon on the toolbar.

|                       | B's Beverages > Pro<br>Project Em |                   |             | ts         | <u>G</u> | Send to OneNote             |
| View All Site Content |                                   | ails and D        | Documen     | ts         |          | Send to OneNote<br>Research |
|                       | Project Em                        | ails and E        | Documen     | ts         |          | Send to OneNote             |

Outlook launches, if it is not already running, and confirms that you wish to connect the library to Outlook.

3. You may choose to connect the List **Online** or **Cached**.

| ? | Connect this SharePoint list or library to Outlook?<br>You should only connect lists or libraries from sources that you know and trust. |
|---|---|
|   | http://support.colligo.com/bsbev/Project Emails/Forms/Group by Project.as   |
|   | Enable local caching for this list or library   |
|   | Yes No  |

For more information, see <u>Contributor Add-In Cached vs. Online</u>.

You may be prompted for credentials to connect to the SharePoint site. Use your default Windows credentials, or supply other specific credentials.

| Login to "support.colligo.com  |               |
|--|---------------|
|  |               |
| <u>ي</u> ا بو  | AF THE SECOND |
| Our contract of the second | S             |
| Ouse the following cred  | entials:      |
| User name:   |               |
| Password:  |               |
| ОК   | Cancel        |

If the site you are connecting to is an Office365 site, a prompt for Office365 credentials displays:

If the **Connect to Outlook** process starts on a page that does not relate to a SharePoint List, the following message displays:

4. Click **OK**, then navigate to a list in IE and click **Connect to Outlook** again.

Once Contributor has finished downloading the List definitions, the folders are made available in Outlook. Contributor builds out a tree for the subfolders of the selected document library.

#### Contributor Add-In Cached vs. Online

Contributor Add-In functions in two modes: Online and Cached.

If you attempt connect a list to Outlook that has already been synchronized in Cached Mode, Outlook displays the SharePoint View of the list. However, the list remains synchronized in Cached Mode.

The Online and Cached views are presented below:

#### **Cached View**

**Online View** 

| 13 A 4  | Colligo for SharePoint - Microsoft Outlook   | Contraction of the second           | 💴 🖸 🔁 🖉 📼  | Celligo for SharePoint – Microsoft Outlook   |                |

#### **Online Mode**

Key functionality of Contributor Add-In operating in Online Mode:

- Does not maintain a cache of data
- Upload content to SharePoint with metadata Prompt
- View the SharePoint site in Outlook
- Navigate through SharePoint site using Outlook folder tree
- Automatically extract Email metadata (To, From, Sent, Subject, etc.)

#### **Cached Mode**

Key functionality of Contributor Add-In operating in Cached Mode:

- Content is cached providing offline access
- Upload content to SharePoint with metadata prompt
- Access and Edit existing SharePoint content including accessing metadata.
- Automatically extract Email metadata (To, From, Sent, Subject, etc.)

#### **Editing Content in Cached Mode**

Select the folder in Outlook to access the Contributor Add-In Cached-View of the List. The Cached view provides access to the content. Here you can work with your content and perform the actions below:

- Open a document by double-clicking on the item
- Right-click on an item to:
  - Edit the properties (metadata) of the item.
  - Open/Edit a document
  - Check Out; Check In; or Discard Check Out
  - o Rename content
  - Delete content

#### **Creating New Content in Cached Mode**

New content can be created by selecting the **New** option.

On SharePoint 2007and 2010 sites, content can be created based on content type templates:

## **UPLOADING EXISTING CONTENT**

### **Using Upload Documents Menu**

Existing content can be added to Contributor by selecting the **Upload** option:

Contributor prompts for metadata when the document is uploaded.

#### Using Drag-and-Drop

Emails can be uploaded to SharePoint by dragging-and-dropping direct from your Inbox into a folder connected to Outlook. Contributor automatically extracts email metadata (To, From, Sent, Subject, etc) to similarly named SharePoint columns (if they are defined).

The .msg format maintains fidelity of the message, including attachments. A unique SharePoint filename is generated based on Sender, Sent, and Subject.

#### Dragging from Desktop to Contributor Cached View

Files or Folder structures can be uploaded to SharePoint by dragging-and-dropping direct from your Desktop (or My Computer) into the Contributor Cached View in Outlook. Contributor prompts for metadata, and uploads the files and folders to the selected library.

#### **Dragging From Desktop to Outlook**

Files can be uploaded to SharePoint by dragging-and-dropping direct from your Desktop (or My Computer) into the Outlook folder tree. Contributor prompts for metadata, and uploads the file to the selected library.

#### **Dragging Email Attachments into Outlook**

Attachments can be uploaded to SharePoint by dragging-and-dropping direct from an email into the Outlook folder tree (or Contributor Cached View). Contributor prompts for metadata and uploads the file to the selected library.

#### **Using Send-and-File**

You can automatically store a copy of sent mail using the **Send & File** command in the Colligo Send & File toolbar.

Select the destination SharePoint location using the Colligo for SharePoint folders in the Outlook folder tree. Filing Advisor suggestions locations based or recently used folders or email conversation. Contributor automatically extracts email metadata (To, From, Sent, Subject, etc.) to similarly named SharePoint columns.

The .msg format maintains fidelity of the message, including attachments. A unique SharePoint filename is generated based on Sender, Sent, and Subject.

#### Using the Copy Folder

Folders and their contents (including sub-folders) from your Mailbox can be uploaded to SharePoint using the Copy folder command in the Colligo toolbar.

A corresponding folder tree is created in SharePoint and the individual emails are uploaded. Contributor automatically extracts email metadata (To, From, Sent, Subject, etc.) to similarly named SharePoint columns.

The .msg format maintains fidelity of the message, including attachments. A unique SharePoint filename is generated based on Sender, Sent, and Subject.

## **Copying Existing Content in Cached View**

Existing content, files, or folder structures can be copied between SharePoint document libraries or folders by a drag-and-drop operation. A new copy of the files or folders is created in the destination location and Contributor prompts for metadata. In cases where the metadata structure in the destination library is different from the source library. Contributor makes a best effort to match and retain existing metadata values.

#### **Emailing Content as an Attachment**

#### **Uploading Attachments**

You can share content with other users by sending them a link (SharePoint URL) to the content rather than an attached file. When creating an email, there is a Contributor toolbar to upload an item and replace it with a link.

#### **Insert SharePoint URL**

You can share content from the cache with other users by using the **Insert** command. **Insert Attachment** formats the URL and inserts it at the top of the body of the email as if it had just been uploaded. **Insert Text Link** inserts the URL at the current cursor location for inline URLs.

#### **Attachment Rules**

Contributor warns or prevents emails from being sent if the total size of attachments exceeds a defined limit. If this limit is exceeded then some attachments may be removed or uploaded to SharePoint and replaced with their URLs. The current limits can be seen with the **Rules** command.

#### Sharing Content

#### **Copying SharePoint URL**

You can share content with other users by right-clicking on an item and selecting **Copy SharePoint URL**. The URLs for the selected item(s) are copied to your clipboard and can be pasted into applications, files, or emails.

#### **Dragging-and-Dropping**

Alternatively, for users that do not have access to the SharePoint site it is possible to drag-and-drop files or folder structures from the Contributor Cached View into an email, Windows folder, or other suitable applications.

## **DEFAULT METADATA AND PROMPTING BEHAVIOR**

Contributor allows you to specify default values for metadata. Default values can be set at a document library, or subfolder level. The default values support both inheritance and propagation.

#### Using the Metadata Dialog

A sample of the Default Metadata dialog is displayed below. The following table explains the function of the dialog.

|              | Name       | Value | Inherited From                 | Apply To                   |
|--------------|------------|-------|--------------------------------|----------------------------|
| Columns      | Attachment | Yes   | 🞁 SharePoint Column Definition | This Folder and subfolders |
| Contacts     | From       |       | 🞁 SharePoint Column Definition | This Folder and subfolders |
| Documents    | Stage      | Draft | 🞁 SharePoint Column Definition | This Folder and subfolders |
| 🗉 🛅 Folder A | State      | FYI   | 👪 SharePoint Column Definition | This Folder and subfolders |
| 🗄 🧰 Folder B | Status     | Draft | 👪 SharePoint Column Definition | This Folder and subfolders |
| Email        | То         |       | 🞁 SharePoint Column Definition | This Folder and subfolders |
| Projects     |            |       | 3                              |                            |

- 1. List Selector Panel
- 2. Default Value Settings
- 3. Add, Edit, and Remove
- 4. Inherit propagating values from parent items
- 5. Clear locally defined values on all child items
- 6. Prompting Behavior

| List Selector Panel                                |                                     | allows you to change the List or Subfolder you wish to work with.<br>lector is only visible if the dialog is access through the File menu.  |
|--|-------------------------------------|---|
| Default Value                                      | Name                                | The Display Name of the SharePoint column   |
| Settings   | Value                               | The default value to be applied.  |
|  | Inherited From                      | <ul> <li>Indicates where Contributor receives this value from. The 'Inherit</li> <li>From' column may take the following values: <ul> <li>SharePoint Column definition</li> <li><not inherited=""></not></li> </ul> </li> <li>Parent Object Name. This may be the name of a document library of a second folder.</li> </ul> |
|  | Арріу То                            | <ul> <li>parent folder.</li> <li>Indicates whether the default value may be inherited by a subfolder.</li> <li>The Apply To folder may take the following values: <ul> <li>This Folder and subfolders</li> <li>This Folder only</li> </ul> </li> </ul>  |
| Add, Edit, and                                     | These buttons all                   | ow you to work with the locally-defined default values.   |
| Remove   | Multiple items ca selection modifie | n be selected for removal using the Windows standard Ctrl and Shift<br>rs.  |
| Inherit propagating<br>values from parent<br>items | Folder and subfol                   | herit propagating values from the parent item. Values specified with 'This<br>Iders' are propagating values and may be inherited.<br>Ig the option Contributor provides the option to copy inherited values   |
| Clear locally-defined values on all child items    | -                                   | e applied with this values checked, child-items are reset to inherit values;<br>d default values on child-items are cleared.  |

| Prompting Behavior | Modify the prompting behavior. The options are:  |
|--------------------|--|
|                    | <ul> <li>Always: The metadata prompt will be displayed when an item is added</li> </ul>  |
|                    | <ul> <li>Never: The metadata prompt will not be displayed when an item is added</li> </ul>   |
|                    | <ul> <li>According to application global settings: Prompting behavior is as defined in the<br/>View &gt; Options dialog</li> </ul> |
|                    | Child-items that are configured for inheritance will inherit this setting.   |

## **ACCESSING THE DIALOG**

#### **File Menu**

The **File** menu may offer different options depending on the elements of Contributor deployed. To access the Contributor Control Panel interface, double-click the Contributor icon in the system tray.

Control Panel

\* When accessed through the File menu, the Default Metadata dialog includes the List Selector Panel.

## **SYNCHRONIZING CONTENT**

Contributor offers different user-configurable synchronization processes to ensure data is kept synchronized with SharePoint. Synchronization runs silently in the background allowing you to continue working with your documents.

#### **Automatic Synchronization Processes**

**Synchronize on startup**: Contributor synchronizes cached content when it starts

**Synchronize when list is viewed**: When you navigate to a list the content is synchronized

**Synchronized when list is modified**: Modifications include changes to the document or metadata

**Enable background synchronization**: Contributor synchronizes content periodically. The default syncinterval is 30 minutes.

#### **Manual Synchronization Processes**

You can manually start the Synchronize command in main toolbar or ribbon:

#### **Full Synchronization**

Several of the synchronization processes allow you to specify Full Synchronization. When Contributor performs a full synchronization, additional information is downloaded. This includes definitions for Sites, Lists, Views, and Content Types, plus other site content that may not be retrieved during other standard sync processes.
